

Objectives

Coltart Contracts is committed to the recovery and recycling of waste materials using sustainable waste solutions and cost-effective services and to reducing their carbon footprint.

General

Increased rates of recycling, reduces the cost of disposal, provides significant benefits to the environment, and adds value to the waste materials. As a result, Coltart Contracts continues to maximise recycling of materials whenever and however we can from customer activities.

Implementation of this Environmental Policy requires the participation of all company stakeholders to ensure that Coltart Contracts maintain an Environmental Management System standard that will in the future be certificated to the ISO 14001:2004 by:

- Ensuring our activities comply with UK Environmental Legislation and other industry requirements.
- Monitoring and controlling energy, fuel and water consumption from our machinery, vehicles and working practices.
- Improving the understanding and awareness of our employees towards environmental issues.
- Committing to continual improvement of our EMS
- Controlling our methods of work to prevent pollution from our business activities.
- We will set SMART objectives and targets at our annual management review meeting and monitor progress

We continue to develop methods in our day to day operational procedures which meet current environmental legislation and industry good practice. We consistently look for ways to improve our environmental impact and to integrate our aims more into our strategic planning process thereby seeking ongoing improvement.

This policy is communicated to all Coltart Contracts employees, contractors and is available to all other interested parties.
